PROFESSIONAL SUMMARY

Computer Engineer with experience across service desk, technical support, product support, product ownership and IT operations. I work at the intersection of users and systems: diagnosing issues, restoring stable operation, documenting decisions and improving repeatable workflows. Comfortable communicating with both technical and non-technical stakeholders, with a practical focus on maintainable solutions and measurable outcomes.

CORE SKILLS

Support	Service desk, hardware/software troubleshooting, incident resolution, user support, documentation
Systems	Windows, Linux, infrastructure maintenance, backups, migrations, recovery procedures
Product	Product support, requirements, prioritization, stakeholder communication, Agile, Scrum
Automation	Python, scripting, GitHub Actions, Google Apps Script, APIs and workflow automation
Web / Git	HTML, CSS, JavaScript, Git, GitHub, GitHub Pages, static deployment
Working style	Diagnose first, reduce risk, verify results, document handoff

PROFESSIONAL EXPERIENCE

Alorica

Oct 2024 - Aug 2025

Agent / IT Specialist

- Provided technical support, troubleshooting, configuration and infrastructure maintenance with direct user assistance.
- Worked across user-facing incidents and operational IT tasks, with emphasis on restoring service and documenting outcomes.

Tata Consultancy Services

May 2023 - Mar 2024

Help Desk Agent / Product Specialist

- Delivered service desk and product support for hardware and software issues in Windows environments.
- Supported Microsoft and Google tools, resolved incidents and documented solutions for repeatable handling.

Tradehelm

2016 - 2018

Product Owner

- Prioritized requirements and coordinated user needs, product goals and development decisions.
- Translated operational needs into actionable product work and supported communication across stakeholders.

Sabre Uruguay

2012 - 2015

Agent / Product Representative / Product Specialist

- Progressed through support and product-facing roles combining user assistance, issue resolution and functional product knowledge.
- Built experience handling technical and product questions in a user-facing operational environment.

SELECTED TECHNICAL PROJECTS

MENELAO - Redundant copy and integrity verification

Python | Tkinter | pytest | SHA-256 | Linux

Desktop application that copies one source to two independent destinations and verifies the X/A/B triangle before the operator reuses the original media. Uses SHA-256 hashes, manifests and reports to provide verifiable evidence of data integrity while keeping the workflow non-destructive.

Foundry companion web

JavaScript | Google Apps Script | State | Authentication

Static companion web application with separate desktop and mobile views, temporary session state and optional synchronization through Google Sheets and Apps Script. The remote backend follows a fail-closed authentication model.

Jona Logistica - Operations automation

Python | GitHub Actions | Operations | Privacy

Operational base that centralized weather, mobility, documents and production tools. The weather workflow combined multiple sources using Python and GitHub Actions; personal data and automations were removed when the production closed.

Self-hosted Foundry VTT infrastructure

Windows | Linux | Backup | Migration | Recovery

Operated a self-hosted environment with application and user data separated, controlled migrations, backups across multiple destinations and documented recovery procedures.

EDUCATION

Computer Engineering

2008

Universidad Catolica del Uruguay

ADDITIONAL TRAINING

Agile | Scrum | Professional Scrum Master | Agile Testing | Foundations of AI | Project Management
